

# Perfectly keyless

Precise wireless localization and secure key management

The smartphone replaces the truck key for greater efficiency and flexibility

## secure key management

**makes it possible to use digital keys on a mobile phone.**

## reliable key location

**makes it possible to lock, unlock and start the truck securely.**

- ▶ The keyless truck access system allows for passive truck access and start, controlled by a digital key on a smartphone, requiring no action on the part of the driver.
- ▶ Smartphone and truck perform the locking and unlocking processes reliably and with precision.
- ▶ When the driver gets out, the truck independently starts to search for the key: if the smartphone leaves the locking zone, it automatically locks itself; the driver is notified by a confirmation message on their smartphone; when the driver returns to the locking zone, the truck is unlocked automatically.
- ▶ The truck owner can grant other users access to the truck – this authorization can be set up with time limits.
- ▶ The keyless truck access system also works for entire fleets. It allows fleet managers to distribute their truck keys digitally.
